## **TROUBLE-SHOOTING**

If you've followed the instruction carefully and your faucet still does notwork properly, take these corrective steps.

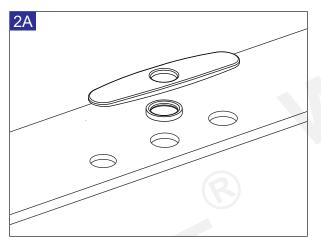

Problem	Cause	Action
Leaks underneath handle.	Cartridge has come loose.	Tighten the cartridge.
Aerator leaks or has an inconsisitent water flow pattern.	Aerator is dirty or worn out or misfitted.	Unscrew the aerator to clean orreplace washer, or replace the aerator.
Water willnot shut off completely.	Dirty or worn out washer in cartridge.	Remove handle and cartridge to check if the washer is damag permanently or dirty. Re-install cartridge.

#### **KITCHEN FAUCET**

You should clean all the dirts from valve outlets. Turning off the water supply valves. This is usually found near the water meter. If you are replacing an existing faucet, remove the faucet from the sink and clean the sink surface thoroughly.

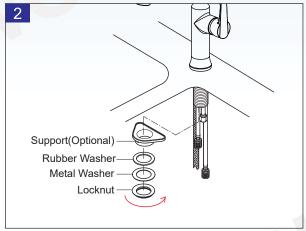

Install with Deck Plate. Place a bead of plumber's putty between faucet and sink. Place Deck Plate over the three holes of sink. From underside sink, tighten Wing nut.

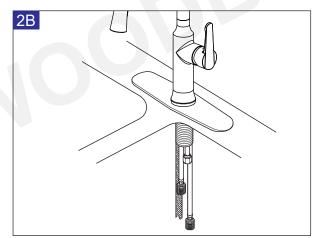

If necessary, tighten screws using a adjustable wrench until the faucet is firmly connected to the sink.

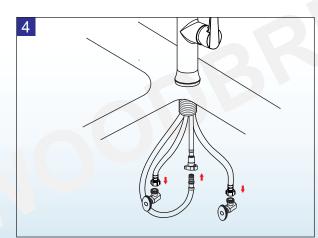

### INSTALLATION PROCEDURES

Install without Deck Plate.Make sure the O-RING is placed onto the bottom of Base Ring. Install faucet through hole in sink. From underside sink, put Plastic Washer and Mounting Nut. Position faucet on sink properly and tighten Mounting Nut.

Make sure the O-RING is placed onto the bottom of Base Ring. Install faucet through Deck Plate. From underside sink, put Plastic Washer and Mounting Nut. Position faucet on sink properly and tighten Mounting Nut.

install brass adapter to the hose inlet from below, Connect hot and cold water supply lines to the Water Supply Valves.

3

#### Warning!!! Do not over-tighten nut during installation. Over-tighten may crack the valve and cause severe leak.

### INSTALLATION PROCEDURES

6

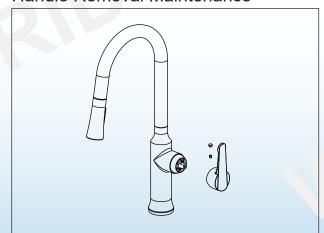

Replace Spray head.

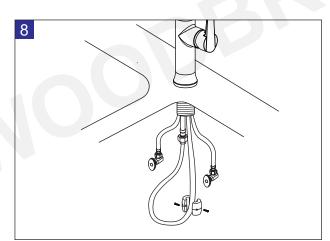

After installation is complete, remove Spray head and rotate handle to the close position. Turn Water Supply Valves on, and check all connections for leak. Flush faucet by running hot and cold water in full position for one minute.

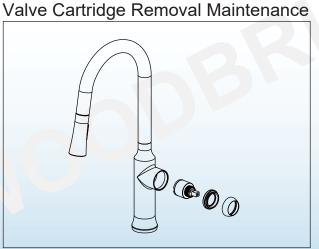

Lift the handle up, the cartridge will be activated allowing water to flow. The water flow will increase by continuing to rotate handle. By rotating the handle to the right, the water temperature will decrease to cold flow only. By rotating Handle to the left, the water temperature will increase to hot only.

Turn off water and relieve pressure! Detach handle button using a small flathead screwdriver, unscrew set screw using Allen Wrench and take off handle.

Attach Weights to the pull-out hose using screws at the proper point of the hose. Be noted Weights are optional.

Remove handles. Unscrew Dome Cap counter clockwise by hand. Unscrew Retaining Nut using adjustable wrench, take out cartridge assembly and inspect. Replace parts as necessary. Reassemble parts by reversing steps.
